

Supplementary information, Figure S6 Transient transfection of the mCherry modRNA in the human Isl1⁺ progenitors.

(A-F) Live cell images showing mCherry expression following (A) 3, (B) 18, (C) 24, (D) 48, (E) 72 or (F) 120 hours post transfection of the mCherry modRNA (1 $\mu\text{g}/10^6$ cells) in the day-7 purified human Isl1-cre eGFP⁺ cells (scale bar in A and the remaining panels = 100 μM).
